ABOUT SUN FIBERGLASS PRODUCTS, INC.

Sun Fiberglass Products started producing hand crafted swimming pools featuring American made composite materials in 1995. The founder and current company president has been in the fiberglass pool business since 1985 starting as an installation contractor/pool dealer in the Tampa Bay Area. The product line features a wide variety of selections, available in 4 color finishes, endless options, backed by our Lifetime Structural Warranty and great customer service.

The manufacturing process utilizes premium composite products. Each piece of fiberglass fabric material is hand cut and our pools are fabricated with our critical point lamination process which creates one of the strongest one piece pools available today.

The Sun Fiberglass factory is an EPA approved Title V facility utilizing the state of the art technology to lower our footprint and provide

a productive environment for our staff. The Albany Kentucky factory features a sales center and an inground display pool. We are members of the American Pool and Spa Professionals, American Composite Manufactures Association ACMA.

Curt Prystupa
Founder/President

- No Fading
- Easy Cleaning

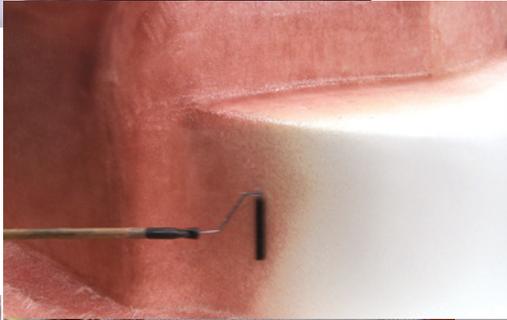

- Pet Friendly
- No Sore Toes

MANUFACTURING

The construction of your new backyard resort begins with a careful inspection of the swimming pool shell mold or form. These design molds are hand-crafted by our company technicians. The form is prepped and your new interior finish is applied. This surface called gel-coat is especially formulated to our standards for your best choice of any interior pool surface. The pool bottom and steps have built-in slip resistance. The third step in production is to encapsulate this new

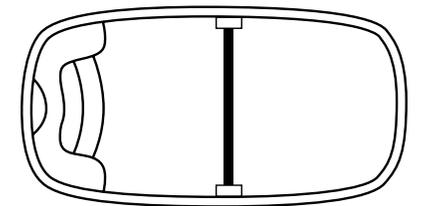

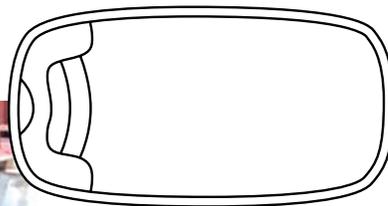

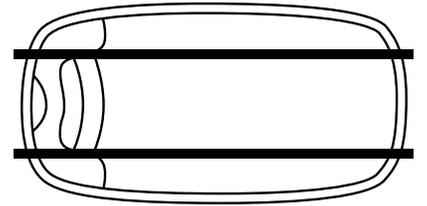

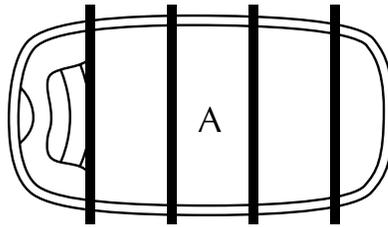

finish with a modified epoxy barrier coat. This barrier coat protects the pool finish from moisture, provides strength for the surface as well as increases elasticity (flexibility) of the pool shell. The fourth process involves using hand laid layers of composite materials to add the bulk of the laminate. Sun pools feature a unique lamination pattern called our Critical Point Lamination process. This process involves using sheet fiberglass fabric that is hand-cut and hand laid for each pool (A). The process places the building material across the pool from side to side, instead of the industry standard of end to end. Our process creates

one of the industries toughest pools. Your new Sun Pool won't need a belly band or spreader bar (brace) across the pool when installed (B).

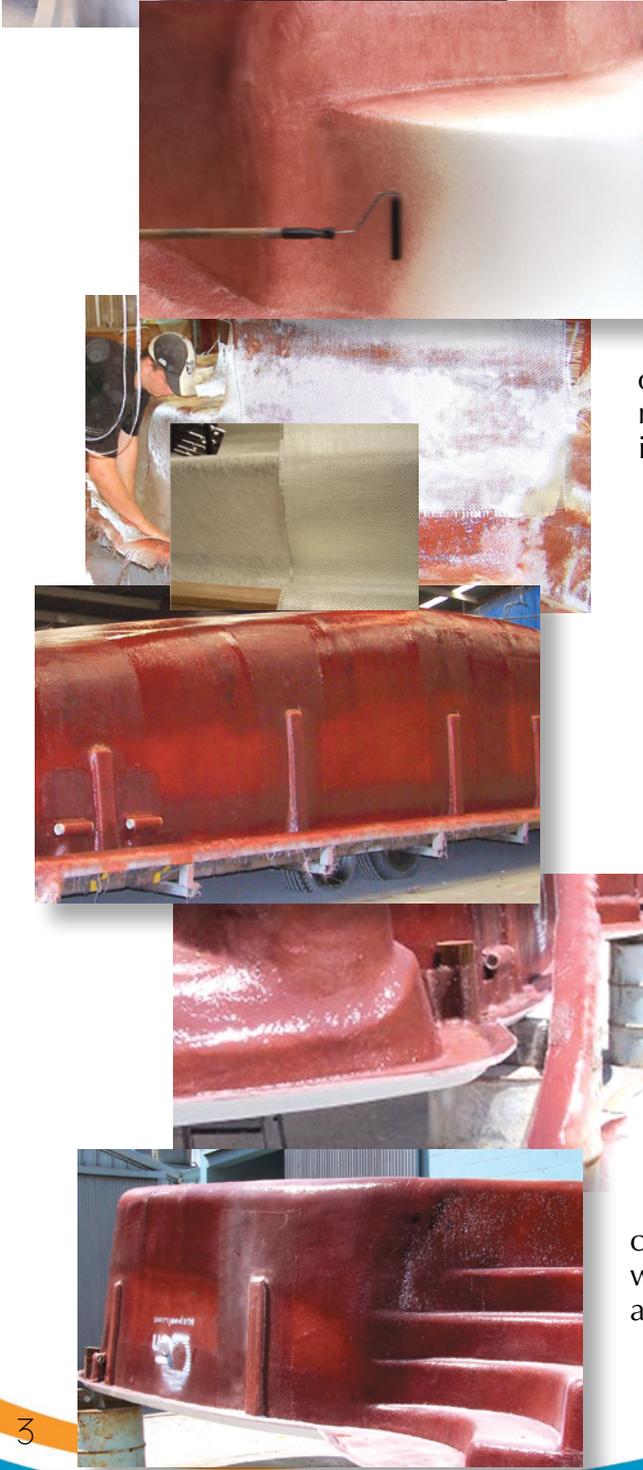

Sun Pools Way

Industry Standard

After the main fabrication is completed, the team of laminators places reinforcing materials on the side walls and coping or top rim of the pool.

The completed pool is removed from the mold and outfitted with your package. Sun Pools are shipped complete: pool, light housings, plumbing fittings, tile, and waterfalls are already factory placed when your pool shell arrives saving weeks of installation time.

INSTALLATION

A typical installation is simple and straight forward for most sites.

1. Layout pool on site.

Remove items in area of pool installation. Remove sod or lawn for pool & deck area. Then lay the pool out according to the installation plan.

2. Excavate for pool.

Following the installation plan setting grade stakes and string lines.

3. Pool arrives.

The pool shell arrives complete and ready to place in the hole.

4. Backfilling pool shell and connecting plumbing lines. Pressure test for leaks.

5. Setting forms for concrete decking.

6. Pour pool deck

7. Construction Clean

8. Install proper safety barriers around pool area.

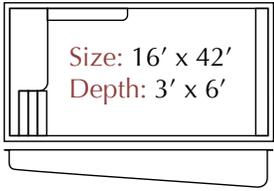

9. Enjoy your new backyard oasis and begin building your pool side memories.

10. Can also be installed in wood decks, roof-tops, in-door applications.
